

# Is Composable Architecture Right for You?

---

To understand whether composable architecture is right for your business, consider the **following questions in 4 steps.**

## 01

### Start with the “Why”

- › What are your major motivations when considering the switch to composable architecture?
- › What are your ambitions or inspirations?
- › What is your vision, and what do you believe will get you there?
- › What are your key requirements?
- › What are your markets and channels?

## 02

### Assess the Current Capabilities

- › Identify the state of your current technology stack.
- › Identify the key technical challenges or opportunities.
- › Map the current customer experience capabilities, such as processes, digital marketing, experience, and customer service.

## 03

### Business of Tomorrow

- › Define the external/internal input on opportunities and gaps.
- › Identify opportunity space within competition and journey gaps.
- › Map high-impact concepts such as new services, functionalities, and capabilities.

## 04

### Evaluate your Tech Approach

- › Define your long-term business objectives.
- › Outline your ideas on the minimum first steps you will take to move to composable architecture.
- › Talk with experts and ask for specific pros/cons in your unique scenario.
- › Decide on your delivery model: one partner vs multiple partners, inhouse vs external, and more.
- › Identify costs, like implementation, licenses, and maintenance.
